openEuler
Getting Started

View Details | Download

1. Experience openEuler

START

+4

Experience the openEuler OS

Experience the openEuler OS in any of the following ways:

- Public cloud
- Virtual machine
- Hardware
- Raspberry Pi

Experience Original Open Source Projects

Experience a range of original open source projects in the openEuler community.

StratoVirt
An enterprise-grade virtualization platform intended for cloud data centers

A-Tune
An AI-based intelligent tuning engine

iSula
A lightweight container solution

secGear
A confidential computing security application development suite for the computing industry

pkgship
A query tool that manages OS software package dependencies and provides detailed dependency graphs

Compass-CI
An open source software platform for sustainable integration, building an open and complete test system

BiSheng JDK
The open source version of Huawei JDK that is developed on the OpenJDK framework. It is a high-performance OpenJDK release that can be used in production environments.

3. Participate in the openEuler Community

+8

Engage in Community Contributions

Once you sign the CLA and join a Special Interest Group (SIG), you can start your contribution journey. Any contribution, big or small, are welcomed and valued by the community.

- Submit and Address Issues
- Contribute Code
- Participate in Non-Code Contributions
- Contribute Original Open Source Projects
- Review Code
- Contribute a Package
- Package Community Components
- Test
- Discover Community Security Issues

+2

Find the SIGs to Participate In

The openEuler community is organized into SIGs to better manage the work processes. SIGs are open to anyone, and finding your perfect SIG is the first step to contributing to community affairs.

- View SIGs
- Start a New SIG
